

Clean Boost Fuel Powder for Motorcycles

Clean Boost FUEL POWDER for Motorcycles is a quick and cost-effective way to improve fuel economy and extend the useful life of engine components. **Clean Boost FUEL POWDER** has been tested extensively by independent labs. It has been shown to reduce carbon particulate emissions and improve fuel combustion. **Clean Boost FUEL POWDER** provides real, measurable savings. Each 100% recyclable tube of **Clean Boost FUEL POWDER** contains enough to treat 5-7 gallons of fuel. Remove cap, dump contents and start to see a difference right away!

1. Removes Deposits
2. Decreases Fuel Consumption
3. Reduces Emissions
4. Lower Exhaust Temperatures
5. Extends Engine Oil Life
6. Extends Equipment Life
7. Decreases Octane Requirements

Actual size paper tube shown. Clean Boost FUEL POWDER powder enlarged. Each tube of Clean Boost Fuel Powder treats 5-7 gallons of fuel

Clean Boost FUEL POWDER removes deposits which cause incomplete burn in the combustion chamber.

Clean Boost FUEL POWDER decreases fuel consumption: As the carbon deposits are removed from the internal engine components, fuel economy improves.

Clean Boost FUEL POWDER Reduces Emissions: The primary source of harmful emissions is carbon deposits. Clean Boost FUEL POWDER reduces and removes deposits, drastically reducing the emissions of CO, NOx, SOx, HC and particulates. Clean Boost FUEL POWDER helps the environment.

Clean Boost FUEL POWDER Lowers Exhaust Temperatures: Clean Boost FUEL POWDER promotes the production of CO2 for a more complete combustion. As the combustion improves, the exhaust phase becomes cooler, extending the life of engine components.

Clean Boost FUEL POWDER Extends Engine Oil Life: Clean Boost treated fuels produce smaller and less abrasive particles during the combustion process. This results in cleaner, longer lasting oil. These results lead to reduced engine wear and less maintenance time.

Clean Boost FUEL POWDER Extends Equipment Life: When carbon buildup is removed, equipment life is increased, oil stays cleaner and friction is reduced. Injectors, valves, rings and other associated parts show little sign of wear even after extended use.

Clean Boost FUEL POWDER for Motorcycles Decreases Octane Requirement: In gasoline applications a lower octane fuel can be used, and still provide the same performance as higher-octane fuels. Dyno testing shows an increase in horse-power without increasing engine temperatures.

Product quick view...

Clean Boost FUEL POWDER for Motorcycles is a combustion catalyst

Why you need it (what it does)

- Improves Fuel Mileage,
- Reduces Emissions,
- Burns fuel more completely so your engine stays cleaner,
- Prevents damaging build-up caused by unburnt fuel or recirculated contaminants.
- Saves money. You'll lose money every time you don't put Clean Boost in your tank.
- More Horse-Power

Who uses it

Police Motorcycles, Cross Country, Off-road, Any make or model

How much do you need?

1 pack (shown actual size above, will treat up to 7 gallons). We recommend pouring the contents of 1 tube each time you fill up.
