

Universal Diesel Fuel Filter with WaterGuard

Patented Technology Removes Emulsified Water

Diesel Engine Fuel Filters will not allow even the Emulsified Water that condenses in your equipment Fuel Tanks to pass to the engine. This new Filter will remove solids to under (5) microns and 16 ounces of the Water or Water-Separated-Alcohol that can form in Gasoline, Diesel Fuel, and Bio-Diesel assuring that only clean dry fuel reaches your engine's injectors.

A universal filter post can easily convert your entire fleet to a single filter part number. A single SKU can take care of all your fuel filter requirements.

And when you service your engines you just discard the Primary Filter as you normally would, move the Secondary Filter to the Primary Position, and buy just "one" new Combust Filter for your secondary position. And in doing so Combust Filters will cut your engine fuel filter costs in half, while protecting you with its Patented Technology filters that will prevent Water, Emulsified Water, or Water-Separated Alcohol from reaching your engines.

Product quick view...

Universal fit, Water-removing Fuel filters

Why you need it (what it does)

- Filters out standing and emulsified water in fuel
- Can standardize to a single filter part number for the entire fleet

Who uses it

Municipal Fleets, Police Departments, Transportation Companies, School Buses, Public Transportation

Filter Post Conversion Bushings

Fuel Filter Head for remote mount
